CENSUS RESULTS IN BRIEF

Male Population: 6 234 931

Female Population: 6 738 877

Total Population: 12 973 808

**Annual Average Intercensal
Growth Rate, 2002 –2012 (%):** 1,1

**Average Size of Households
(no. of persons):** 4,2

**Population Density
(persons/square km):** 33

Foreword

The 2012 Population Census is the fourth such exercise to be undertaken by the Government of Zimbabwe since Independence in 1980. It was carried out exactly 10 years after the third census in 2002. Planning for the 2012 Population Census started in 2007 and the census was done according to international recommendations.

This is the first in a series of reports on the 2012 census. It is based on the provisional results obtained from the districts. The report basically provides information on the total number of males and females by ward, district and province. It also provides basic information on population density and growth, a summary of field enumeration procedures and census organization. It must be emphasized that these are provisional results. Detailed results will be published in a series of subsequent reports after completion of data processing and further analysis.

We would like to thank the following development partners and donors for their financial and material assistance:-

Australian Agency for International Development, Danish International Development Agency, United Kingdom Department for International Development, the European Union, Swedish International Development Agency, United Nations Development Program, United Nations Children's Fund and United Nations Population Fund.

We sincerely extend our gratitude to all persons who were engaged in census operations and the general public for its co-operation.

M. Dzinotizei

Director-General, Zimbabwe National Statistics Agency

Harare, December 2012

1 Introduction

Census taking in Zimbabwe began as early as 1901 but was confined to the non-African population. The first enumeration of the whole population was done in 1961/62 and then in 1969. However, in these two censuses the African and non-African populations were enumerated at different times and using different questionnaires. The 1982 Census was the first census with a single reference period and the same questionnaire for the whole population.

After the 2002 Census, a number of population-related or demographic surveys were undertaken within the framework of the Zimbabwe National Household Survey Capability Programme. These surveys include the 2005-2006 and 2010-2011 Demographic and Health Surveys and the 2007 and 2008 Inter-Censal Demographic Surveys.

1.1 *Census Objectives and Procedures*

The main objectives of a census are:

- to provide current information on demographic and related socio-economic characteristics of the population at national and sub-national levels. Such information facilitates effective planning and evaluation of development programmes;
- to provide and maintain a time series of demographic data at national and sub-national levels. These data enhance appraisal of the past, assessment of the present and estimation of future trends;
- to develop the national capabilities to produce, coordinate and disseminate relevant, accurate and timely statistics to meet the information needs of various users;
- to improve the capability to advise other users and producers of statistics; and
- to develop and maintain an efficient sampling frame for surveys.

1.2 *Initial Preparations*

Preparations for the 2012 Census began in 2007 and one of the major preparatory activities for the 2012 Census was conducting of the 2007 Inter-Censal Demographic Survey which also acted as a pilot survey for the 2012 census.

1.3 Methodology

1.3.1 The de facto Concept

A population census can be taken either on a *de facto* or *de jure* basis. The latter involves enumerating people at their place of usual residence. The 2012 census however, was conducted on a *de facto* basis, relating to the night of the 17th of August. This means that all those people who spent the night of the 17th /18th of August in Zimbabwe were counted, irrespective of their citizenship, nationality or residence status. Consequently, Zimbabweans who were out of the country on the census night were not counted.

1.3.2. The Household concept

It should be noted that the main objects of the enumeration are i) the individual and ii) the household. A household, as defined for the 2012 Population census, is a person or group of persons who stayed the census night i.e. Friday night of the 17-18th of August, 2012, together in a dwelling unit, whether or not they were related by blood or marriage.

1.3.3. Geographical Frame

The geographical frame for the 2012 Census followed the spatially defined structure of provinces, administrative districts and wards. In an effort to ensure that the whole country was covered during the enumeration period, the whole country was demarcated into small areas known as enumeration areas (EAs). Each one of these EAs was covered by one enumerator. The identified boundaries of the EAs were such that they did not cut across existing provincial, district, or ward boundaries.

There were also special population categories which, by definition, did not belong to any defined area, or for some reason, required special arrangements in order to be enumerated. The special population categories included among others, the homeless, vagrants, persons who were travelling on trains or buses on the census night, persons in camping sites, prisons, hotels and in other unstable population situations.

1.3.4 Census Questionnaires

Census information was collected using a pre-coded questionnaire (see copy in Appendix 1a). The questionnaire was made up of the following sections:

- A. Identification of enumeration area and household
- B. Socio-economic and demographic characteristics of household members. Disability was included here.
- C. School attendance and level of education attained by all household members age 3 years and above. Current attendance for those age 3 – 24 years.
- D. Labour force characteristics for those age 10 years and above
- E. Fertility questions for women age 15-49 years
- F. Living conditions
- G. Deaths in the household in the past 12 months
- H. Total number of people in the household by sex

A simplified version of the questionnaire was used for some special population categories, e.g. the vagrants and those in prison.

1.3.5. Census Activities

The main activities included:

- pre- enumeration activities which included cartography, questionnaire design, preparation of tabulation plan as well as preparation of various manuals, census field tests, pilot tests, etc;
- the actual enumeration; and
- post-enumeration activities which involve editing, preparing and releasing of preliminary results from the census, data processing, analysis and dissemination and also conducting a Post-enumeration survey.

1.4 Census Organization

The Zimbabwe National Statistics Agency (ZimStat), through the Population Census and Surveys Division, conducted the 2012 Census. Several census committees and sub committees were set up to guide and assist the office in executing the census operations. These include:

- National Census Committee;
- The Inter-ministerial Technical Census Committee which had sub-committees on Cartography, Publicity, Human Resources and Logistics and Data Processing;
- Census Analysis Committee;
- The Census Coordinating Committee made up of members of the directorate within ZimStat and the Population Census and Survey Division; and
- Provincial and District level leadership which coordinated other logistical issues at sub-national level.

1.4.1 Recruitment and training

A total of 31 519 persons were recruited and trained as enumerators. The district supervisors assisted by the enumeration area supervisors trained the enumerators. In total, about 37 697 people were involved in field operations.

1.4.2. Publicity

Various media were used to publicize the census. These were:

- The local press i.e. newspapers, radio and television which published and produced various reports on the census activities. Jingles were also played on radio and television;
- Census information pamphlets and posters, which were sent to various institutions and individuals around the country ; and
- Provincial and district leadership of various organisations also played a role in publicity through informing the local authorities and the public in their provinces and districts about the census exercise.

1.5 Quality Control

In the field, the completed questionnaire was checked for completeness, accuracy and consistency and was also edited by the enumeration area supervisor. Corrections were made on the spot and call-backs were done to collect missing information. After the enumeration exercise, all the completed questionnaires were checked at district and provincial levels.

Population figures for the districts were manually compiled at the district office. These figures were entered into the computer to facilitate the production of various tables for ward, district and province and finally the whole nation. This report is based on these figures.

1.6 Dissemination Plan

In addition to this preliminary report, provincial profiles and a national report of the population will be published. There will also be publications on census operations and cartography, population projections and a census atlas. Pamphlets and leaflets on finer results of the census will also be distributed to the general public. In-depth analysis will be undertaken for selected thematic areas.

The publications will be complemented by workshops at national and provincial levels. The participants in these workshops will include representatives of all government departments and ministries and other user organizations.

2 Major Results

2.1 The 2012 Census Figures

The population of Zimbabwe on 18 August 2012 was **12 973 808**. Of this population **6 234 931** were males and **6 738 877** were females. This means that the overall sex ratio was 93 males per every 100 females. The population constituted 3 076 222 households, leading to an average of 4, 2 persons per household. With an area of 390 757 square kilometres, Zimbabwe has a population density of 33 persons per square kilometre.

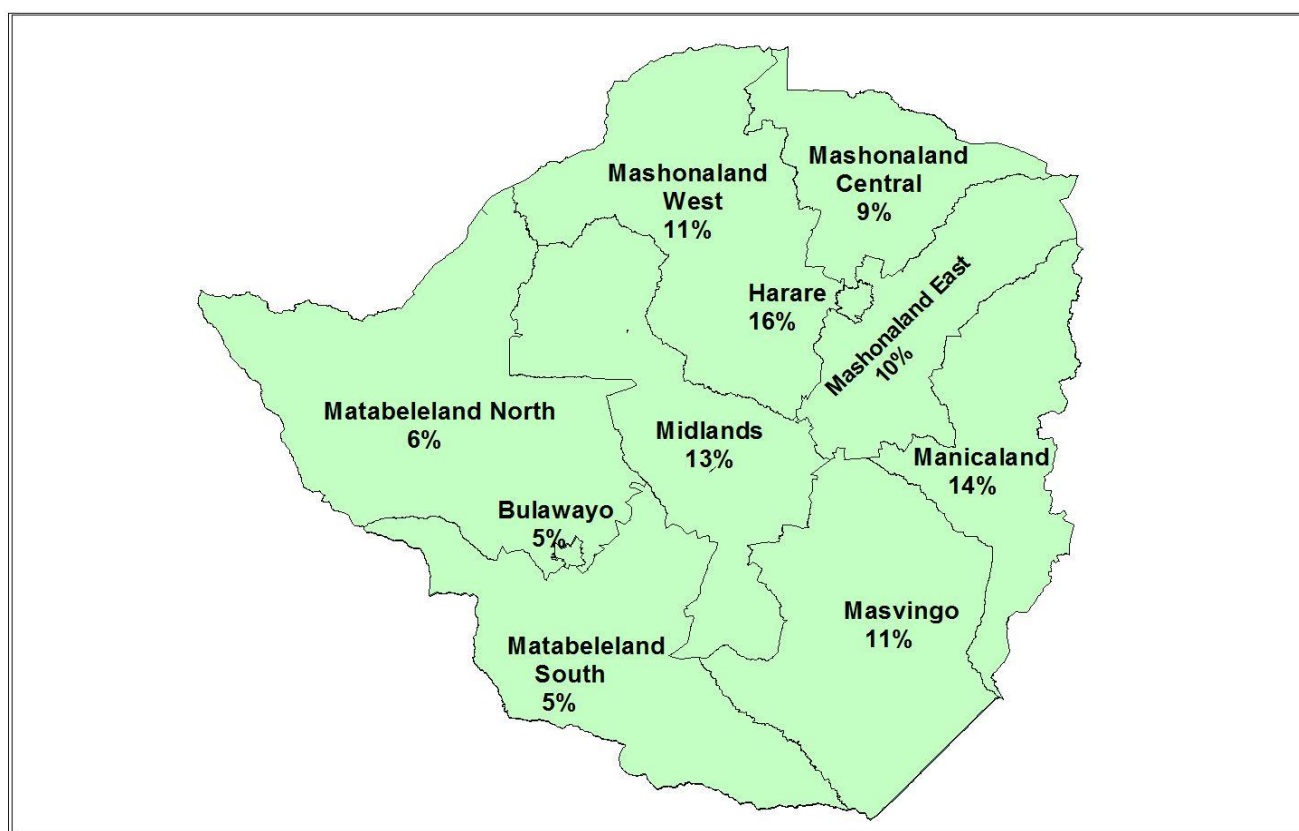

2.2 The 2002 Census Figures

In 2002 the population of Zimbabwe was 11, 6 million, consisting of 5, 6 million males and 6 million females and the sex ratio was 95 males per 100 females.

2.3 The 2002 -2012 Inter-censal Population Growth Rate

From the above figures the average annual inter-censal population growth rate between 2002 and 2012 is nearly 1,1 percent. With such a growth rate the population will double in roughly 70 years.

2.4 Distribution of the Population by Province, 2012 Census

The distribution of the population by province for 2012 indicates that Harare with 16 percent of the total population is the most populous province. Manicaland Province is next with 14 percent, followed by Midlands (13%), Masvingo (11%), Mashonaland West (11%), Mashonaland Central (9%), Matabeleland North (6%), Bulawayo and Matabeleland South with (5%) each.

2.5 Distribution of Households by Province, 2012 Census

The distribution of the number of households by province follows almost the same pattern as that of the population distribution except for Harare, which has 17 percent of the total (*Table 2.1*). This large number of households in Harare, relative to the other provinces, is an outcome of the size of the households themselves. Unlike predominantly rural areas, relatively many households of small size usually characterize urban areas like Harare.

2.6 Sex Ratio by Province, 2012 Census.

The sex ratios by province range from 99 to 87 males per 100 females. Masvingo and Bulawayo provinces have the lowest while the highest is in Mashonaland West. All the provinces had relatively more females than males.

2.7 Provincial Growth Rate, 2002 – 2012(%)

Mashonaland East and Mashonaland West have the highest growth rates of (1,7%) followed by Mashonaland Central (1,3%), Masvingo (1,2%), Manicaland (1,1%), Harare and Midlands (1,0%) then Matabeleland South and Matabeleland North (0,5%). Bulawayo has a slight decrease in population size having a growth rate of (-0,3%).(*Table 2.2*)

2.8 Population Density by Province 2012 Census.

Harare has the highest proportion of the country's population. The same province also happens to have the highest population density. The number of persons per square kilometre in Harare is 2406. This is followed by Bulawayo (1 369) then Manicaland (48), Mashonaland East (41), Mashonaland Central (40), Midlands (33) Masvingo (26) Mashonaland West (25), Matabeleland South (13) and Matabeleland North (10).

Appendix 1a: Census Questionnaire

REPUBLIC OF ZIMBABWE

Population Census 2012

1104121027

IF A CONTINUATION QUESTIONNAIRE FOR THIS HOUSEHOLD MARK HERE

1. Who stayed the Friday night (17 August) here? Write the names of all adults, children and babies. Include visitors and persons temporarily absent (on night duty, travel, etc. not counted elsewhere), returning on Saturday morning (18 August). List all persons starting with the person who was heading the household on census night.

2. What is (name/s) relationship to the head of household?

Head
Spouse
Son/daughter
Parent
Grandson/daughter
Brother/sister
Other relative
Non relative

3. Is (name) male or female?

Male
Female

4. How old was (name) at his or her last birthday?

Enter age in completed years ('00' for children less than one year)
EXAMPLE: NAME is 37

5. Does (name) have a birth certificate?

Yes
No
Not known

6. Where was (name) born?

Enter district or country code

7. Where does (name) usually live?

Enter district or country code

8. What is (name) doing?

Enter district or country code

9. What is (name) doing?

Enter district or country code

10. What is (name) doing?

Enter district or country code

11. What is (name) doing?

Enter district or country code

12. What is (name) doing?

Enter district or country code

13. What is (name) doing?

Enter district or country code

14. What is (name) doing?

Enter district or country code

15. What is (name) doing?

Enter district or country code

16. What is (name) doing?

Enter district or country code

17. What is (name) doing?

Enter district or country code

18. What is (name) doing?

Enter district or country code

19. What is (name) doing?

Enter district or country code

20. What is (name) doing?

Enter district or country code

21. What is (name) doing?

Enter district or country code

22. What is (name) doing?

Enter district or country code

23. What is (name) doing?

Enter district or country code

24. What is (name) doing?

Enter district or country code

25. What is (name) doing?

Enter district or country code

26. What is (name) doing?

Enter district or country code

27. What is (name) doing?

Enter district or country code

28. What is (name) doing?

Enter district or country code

29. What is (name) doing?

Enter district or country code

30. What is (name) doing?

Enter district or country code

31. What is (name) doing?

Enter district or country code

32. What is (name) doing?

Enter district or country code

33. What is (name) doing?

Enter district or country code

34. What is (name) doing?

Enter district or country code

35. What is (name) doing?

Enter district or country code

36. What is (name) doing?

Enter district or country code

37. What is (name) doing?

Enter district or country code

38. What is (name) doing?

Enter district or country code

39. What is (name) doing?

Enter district or country code

40. What is (name) doing?

Enter district or country code

41. What is (name) doing?

Enter district or country code

42. What is (name) doing?

Enter district or country code

43. What is (name) doing?

Enter district or country code

44. What is (name) doing?

Enter district or country code

45. What is (name) doing?

Enter district or country code

46. What is (name) doing?

Enter district or country code

47. What is (name) doing?

Enter district or country code

48. What is (name) doing?

Enter district or country code

49. What is (name) doing?

Enter district or country code

50. What is (name) doing?

Enter district or country code

51. What is (name) doing?

Enter district or country code

52. What is (name) doing?

Enter district or country code

53. What is (name) doing?

Enter district or country code

54. What is (name) doing?

Enter district or country code

55. What is (name) doing?

Enter district or country code

56. What is (name) doing?

Appendix 2: Timetable for the 2012 Zimbabwe Population Census

Appendix 3: Glossary

2002 Population Census:

This refers to the number of persons who were physically at the place of enumeration during the census night of 17/18 August 2012, irrespective of their status of residency, nationality or citizenship.

De facto/de jure:

A population census can be taken either on a de facto or on a de jure basis. The latter involves enumerating people at their place or usual residence, while the former requires them to be enumerated at the place where they were physically located during the census reference period. The 2012 census in Zimbabwe was conducted on a de facto basis, relating to the night of the 17/18 of August. This means that all those people who spent the night of the 17/18 of August in Zimbabwe were counted, irrespective of their citizenship, nationality or residence status. Consequently, Zimbabweans who were out of the country on the census night were not counted.

Sex Ratio:

The number of males per 100 females

Intercensal Population Growth Rate:

The average annual rate of growth between 2002 and 2012, expressed as a percentage. It is assumed that the population is growing geometrically.

Population Density:

The number of persons per square kilometre. This is simply the population divided by the surface area of the country/province.

Household:

A household, as defined for the 2012 Population Census, is a person or group of persons who stayed the Census Night, i.e. Friday night of the 17th of August, together in a dwelling unit, whether or not they were related by blood or marriage

Household Size:

The number of persons per household. This is the population divided by the number of households in the country/province.
